

EMC MISTIFYER

SII Dry Kilns introduced the EMC Mistifyer to the lumber drying industry in 1993. This innovative technology uses a cool fog produced by a high pressure (800-1200 psi) water pump as an alternative to conventional steam conditioning. SII Dry Kilns is clearly the industry leader with over 180 kilns utilizing the EMC Mistifyer Cool Water conditioning system.

Advantages

- Saves energy and boiler capacity
- Eliminates the loss of expensive boiler chemicals
- Allows conditioning without Dry Bulb override
- Reduces time required to condition
- Keeps "white woods" much brighter than with steam

EMC Mistifyer Features

- NEW!** Dual spray manifolds that alternate with fan direction for optimum absorption
- NEW!** Reduced spray nozzle size creates more fog and less condensation
- Pumps can be used for individual or multiple kiln applications
- All manifolds and high pressure tubing are 100% stainless steel
- Dual function water filtration on all systems
